

SX-SVL-Silent

Silently roll-out SX Virtual Link software across your system

Users of Silex' USB Device Servers connect and disconnect to their USB devices via network using the software SX Virtual Link. For large roll-outs and companies trying to minimize the installation effort it would be efficient and cost effective to integrate the Software Setup in their Silent Installation Routine. Now they can.

Silex technology offers a customised version of SX Virtual Link, that installs the software completely silently. There is no user interaction required. Pop-Up-Windows are suppressed. As this special version uses a Microsoft certified driver, there is also no WHQL (Windows Hardware Quality Labs) message that appears to inform about uncertified drivers.

SX-SVL-Silent is delivered as an executable file and installs the standard version of SX Virtual Link while using a specific type of the virtual USB driver. After the installation, the software is ready to use.

SX Virtual Link is a software application for the use of silex' USB Virtual Link technology. With SX Virtual Link, the computer can establish a remote connection via the network to any USB device connected to the USB Device Server. USB Device Servers with silex' USB Virtual Link technology turn virtually any USB device into a network resource. A variety of USB devices can be used on a network, just as though they were directly connected with a USB cable.

SX-SVL-Silent is available at € 199,00.

About silex

Since 2000, silex technology europe GmbH has been a subsidiary of the Japanese company silex technology, Inc. The parent company in Japan has been involved in development and production since 1973. Thus silex technology can look back on nearly 40 years of experience and quality work. In addition to the central company headquarters in Kyoto, there are locations in Tokyo, the USA, China and Europe.

Today, the silex group is not only a world market leader in integrated network printing technology, but also a leading supplier of connectivity in the areas of USB, serial and WLAN. Many well-known manufacturers of computer peripherals rely on the technologies of silex technology and use them as OEM suppliers for their own products.

Their product line includes print, USB and serial device servers, as well as modular WLAN solutions. In addition to mature technologies and quality products, the company also offers a complete ranges of services, such as lifetime free support by telephone, email or remote access for all customers.
